• For any $E \in \mathcal{E}$, one can find $F \in \mathcal{E}$ such that

$$\int_{E} \rho_{\infty} d\lambda_{E} \geq \int_{F} \rho \lambda_{F} \geq 1.$$

Thus ρ_{∞} is admissible for Λ .

• $\int_X \rho d\mu \leq \int_X \rho_\infty d\mu$ where X is the space that $\mathcal E$ covers.

Quasisymmetric images of Brownian graph: minimal dimension

$$\int_{E} \rho_{\infty} d\lambda_{E} \geq \int_{F} \rho \lambda_{F} \geq 1.$$

Thus ρ_{∞} is admissible for Λ .

- $\int_X \rho d\mu \leq \int_X \rho_\infty d\mu$ where X is the space that \mathcal{E} covers.
- It is sufficient to prove that $\int_X \rho_\infty d\mu > 0$.

Figure: A minimal graph with 3 generations.

• For any $E \in \mathcal{E}$, one can find $F \in \mathcal{E}$ such that

$$\int_{\textit{E}} \rho_{\infty} \textit{d} \lambda_{\textit{E}} \geq \int_{\textit{F}} \rho \lambda_{\textit{F}} \geq 1$$

Thus ρ_{∞} is admissible for Λ .

- $\int_X \rho d\mu \leq \int_X \rho_\infty d\mu$ where X is the space that $\mathcal E$ covers.
- It is sufficient to prove that $\int_X \rho_\infty d\mu > 0$.
- Recall that $\mu(B(x,r)) = \int_0^1 I_a(B(x,r) \cap Z_a) da$.
- $\int_X \rho_\infty d\mu \ge \left(\int_E \rho_\infty d\lambda_E\right) \inf_{a \in [0,1]} L^a(Z_a \cap X) \ge \inf_{a \in [0,1]} L^a(Z_a \cap X) > \delta > 0.$
