

Transportation

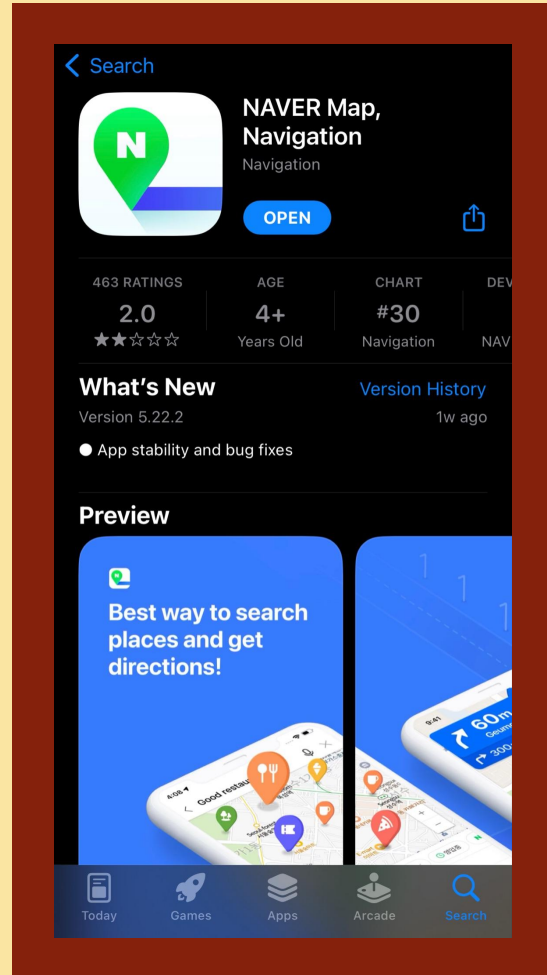

Getting around Korea

Naver Map

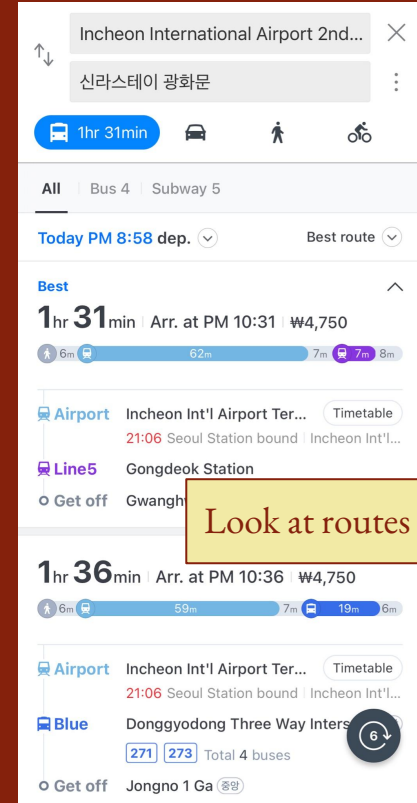

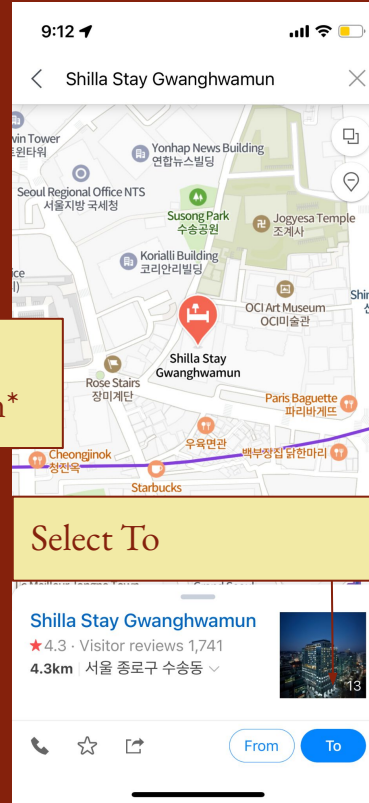

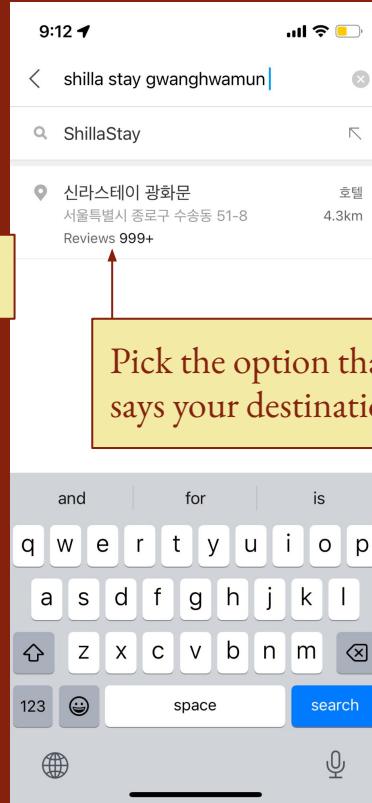

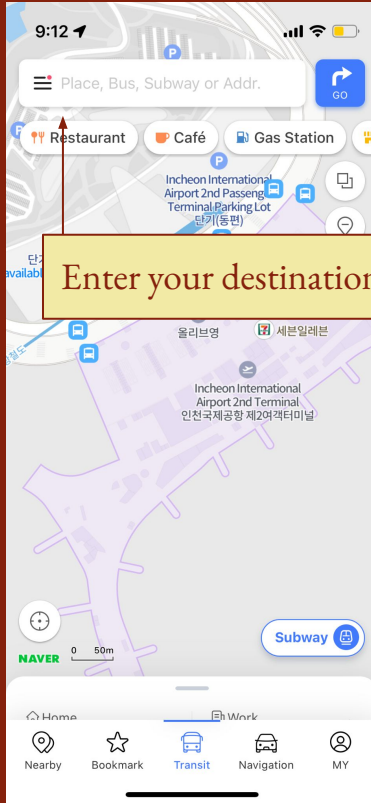

Korea blocks Google Maps because it is technically “wartime” in South Korea. We use Korean made apps instead.

The easiest way to navigate your way through Jeju is using the Naver Map app.

This navigation app give good routes for public transportation.

Using the App

Using the App

Starting point

Current time

Can be changed to a different time for planning with estimated times for everything**

Length of trip

Name of Line + Color of the Line

Alternative Routes

Destination*

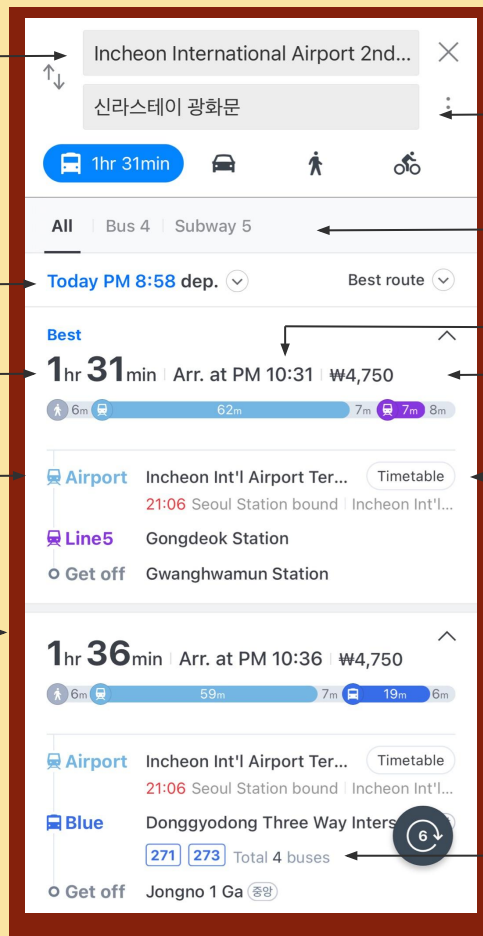

Click method of transportation (or all if you would like to see all options)

ETA

Estimated cost of trip for adults (teens, children, and the elderly are cheaper)

For subways, you can check the time table to see when the next subway is going to come Korea is typically good at keeping on schedule for subways, but it fluctuates sometimes

The bus + alternative buses that go to the same stop

*Some destinations pop up purely in Korean. Most of the time the first address you pick after typing in the name in English will be correct (if you have the Korean name to check, it could be helpful to prevent any mistakes)

**For example, if you would like to leave tomorrow at 4 pm, you could adjust the time to see how long it would (typically) take at that time

Taxis

Korean Taxis have different colors that signify different things

- Orange and Silver - Normal taxis
- Black - Premium Taxis

Black taxis are known to have higher fares than normal taxis because the drivers are better trained.

Using the Subway and Bus

To use public transportation in Korea, you need to purchase a T-Money card.

Buses used to be able to take cash, but that's being phased out currently

This card can be bought at convenience stores that have the T-Money logo

All convenience stores inside the airport sell T-Money cards

The main convenience stores are 7/11, CU, and GS25

These cards can be charged in convenience stores and subway stations

Look for these machines
